WAP to implement a simple FTP server/client which allows the following operation:

a) List the files in the server (eg: ls)

b) get a file from the server (get <filename>)

c) put a file to the server (put <filename>)

e) Multiple put files to the server (mput <filename1> <filename2>….)

d) Multiple get files from the server (mget <filename1> <filename2>….)

c) Delete the file in the server (del <filename>)
